**Abstract**— The vast majority of the plans brought by the Government go into dustbin in light of the fact that the authorities who actualize the plans couldn't make them accessible to reasonable individuals. So there is an anchored and straightforward framework required which empower a conventional individual to specifically apply for a plan and track the status every now and then and know whether he is qualified for get the organic product or his application is dismissed by the authorities. Regardless, the candidate ought to have the capacity to know the purpose behind dismissal transparently. This gets trust in the Government from the general population and stays away from misuse of assets. Government Scheme Management System is a product application to robotize the procedure for usage of different plans gave by government to different offices. Government Scheme Management System Software deals with the exercises identified with the plans gave by the administration. The real obligation is to deal with the best possible use of various plans straightforwardly.

**Key words:** Women Welfare Schemes, Quick Status View

## I. INTRODUCTION

All the schemes fall under the various departments administrative control and each scheme have different criteria for selections of beneficiaries'. It is right time to develop a dedicated website where all departments' women related updated schemes information is available for citizen. Information regarding brief description, district level contact person, address of office and eligible beneficiary criteria etc. If such problems are resolved on the digital platform that could help to promote women welfare scheme and awareness across the State.

### A. Expected Outcomes :

- All information available under one application that women can easily access the services available.
- All scheme related information will be easily available to women.
- Details about application forms and lists of necessary supporting documents that they were updated.
- Geographical mapping of district office locations or contacts for support women welfare activities.
- Geographical mapping of such NGOs/CBOs/Shelter homes/Child Homes/Old age home etc.
- Women can view their application status which will update time to time.

Identifying the schemes for the women had become a very hectic job. So we are creating a one stop search for all the schemes providing to the women by the government in one web.

### B. Objectives

- Women scheme generation for the data visualization.
- To provide single platform to access all the available schemes and benefits.

- To provide easier interfaces for women to get benefits.
- To create application where women can get their services by sitting at home.

## II. LITERATURE SURVEY

Study process is particularly basic for every Software advancement. The Survey procedure is expected to get the necessity for the product. The Survey additionally comprises of concentrate the present framework and furthermore learning about the apparatuses required for the improvement of the product. A legitimate comprehension of the instruments is especially fundamental. Following is a concentrate of the data of the material gathered amid writing study.

## III. RELATED WORK

Plans brought by the Government go into dustbin in light of the fact that the authorities who actualize the plans couldn't make them accessible to appropriate individuals. So there is an anchored and straightforward framework required which empower a normal individual to specifically apply for a plan and track the status occasionally and know whether he is qualified for get the natural product or his application is dismissed by the authorities. Regardless, the candidate ought to have the capacity to know the purpose behind dismissal transparently. This gets trust in the Government from the general population and dodges misuse of assets. It isn't anchor to keep up essential data physically. More manual hours need to produce required reports. It is dull to oversee verifiable information which needs much space to keep all the previous years applications, books and so on. Client need to hold up more opportunity to get his application status. Information isn't in a state of harmony if there should arise an occurrence of manual framework. No appropriate area for profiting all plans data No particular ladies plans arranged entry

## IV. PROPOSED SYSTEM

All the schemes fall under the various departments administrative control and each scheme have different criteria for selections of beneficiaries'. It is right time to develop a dedicated website where all departments' women related updated schemes information is available for citizen. Information regarding brief description, district level contact person, address of office and eligible beneficiary criteria etc. If such problems are resolved on the digital platform that could help to promote women welfare scheme and awareness across the State.

### A. Clustering Technique

The task of grouping a set of objects in a single group and are more similar to each other than to those in other groups or clusters is known as clustering analysis. This technique is one of the most popular subjective modeling which is

widely used in industries. Clustering technique is generally used to perform initial profiling for the each portfolio. after understanding the entire portfolio, this technique will be used to build particular strategy.

## V. RESULT & DISCUSSION

Government Scheme Management System is a software application to automate the process for utilization of various schemes provided by government for various departments. Government Scheme Management System Software takes care of the activities related to the schemes provided by the government. The major responsibility is to take care of the proper utilization of different schemes in a transparent way. Ministry of Women and Child Development, Government of India have come up with various schemes, programmers, social welfare schemes is for the upliftment of the women status in the society.

## VI. CONCLUSION

I am providing a convenient and efficient way for application to enrolment of schemes of women, where the enrolment of schemes is done with the help of web based applications with the help of Segregation and Clustering techniques. The application provides an easy access for all the women those who are eligible for services. The application is built to provide all the services regarding women under single umbrella and every women can get services without any third party. The welfare schemes are created for women for the empowerment of the women in the society. So this application provides access to all women schemes provided by government under single canopy.
