Abstract— This paper is written about the human educational knowledge and experience of their job. What does he gain/achieve after spending lots of time in both? What he learns and did in the duration of both systems? It doesn't matter which type of education he got and which type of job experience he got. Both of them part with life and two aspects of the same coin. We can say that, education is the step of gaining knowledge and experience is the step of execution of obtained knowledge. This paper is described all about education and experience so it is entitled by name of Education versus Experience.

Keywords: Education, Experience, Job, Past, Future, Knowledge, Employee, Learner, Life, Increase

I. INTRODUCTION

On the earth every human gain education in different ways with different thinking for different purposes and does a job on the basis of their need or knowledge. a long duration of job is called experience.

It is difficult to describe what is education and what is experience? different authors define education and experience in many ways. so, we can say that the meaning of 'education and experience' may be separate for each and it depends on his thinking.

Education and experience both of them are a continuous process of knowledge to learn. one of them teaches how to make the future bright and the second one teaches how to apply past knowledge.

A. Education (What is education?)

Education is the process of learning, gaining knowledge, growing the skills and identifying the others emotions. Education can get from anywhere, time and anyone. There are no limits or face or cask of education and this is not things to carry from one place to another place. This is the pseudo power of humans that he fills the powerful and self-dependent.

Often education gets from others as guidance of family members, friends and teachers but we can also get the education by self from nature, other persons activities and by learning the different kinds of educational books and news.

But I think there are slight differences in both types of education, i.e. in under guidance education and in self-education.

Under guidance education, it is the bipolar process between the learning and the teaching. Here, one side, student or learner gets the knowledge by the other side and another side teaches according to his past experience and knowledge and possibilities of future facts.

In this type of education, the learner fully depends on the guider/ teacher/ faculty and this is systematic. so, it helps the learner to gain knowledge in the right way and correct form. it helps to achieve learner future goal and

make self-confidence, increase interest, intelligence, skills and personality.

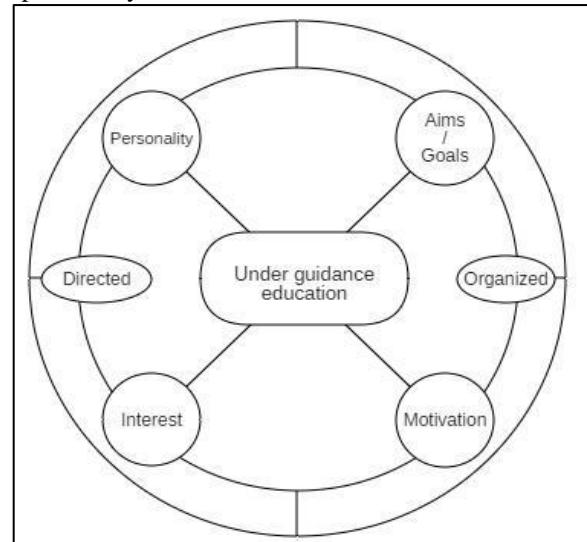

Fig. 1: Under Guidance Education

In the above figures it is shown that guidance education is directed and managed. So, I can say that Under guidance education is the best for all.

Self-education is also good for those who learn regularly and try to understand things easily. it is fully dependent on self. In self-education, it has been the most important fact to encourage yourself by a celebrity or a role model. It is a great experience for the learner to train themselves and develop their own skills.

A learner sets a goal for the subject and time for the learning topic that what and how to learn today or in a specific time period. Nowadays there are several types of information available so it is easy and interesting to gather knowledge from different resources and it is helpful to groom the skills.

Here there is no limitation of time, a learner can learn more and study deeply. There is no limit to how much and what to study. A learner can learn his subject until he understands it. There is a wide range of learning but there is no one to give guidelines / rules for the study so that it is known what and how much to learn.

so, this type of learning is fully dependent on the learner. because he pre-planned for the study and targeted his goal.

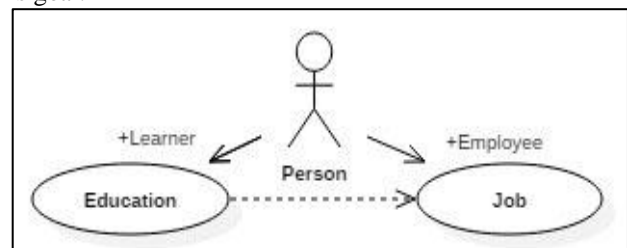

Fig. 2: A person Role in Education and Job

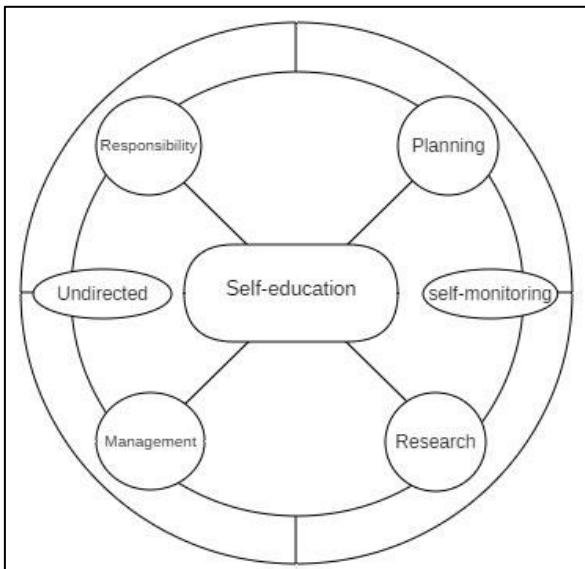

Fig. 3: Self-Education

In the above figures, an attempt has been made to show the primary requirements of self-education to the learner to develop his skills.

Sn.	Term	Under Guidance	Self-Education
1.	Study planning	Teacher/guide.	Self
2.	Assessment	Teacher/guide.	Self
3.	Learning Style	Teacher/guide's diary.	Self-diary
4.	Responsibility	Guider	Self
5.	Study type	In group	Alone
6.	Study style	May be hard/soft	Own style
7.	Interaction	Between group	No any one
8.	Study help	Guider/ mates	Internet/ books
9.	Debet	In group, By Group	Free
10.	Study time	Limited	As wish
11.	Propaganda	May be	No
12.	Place	A common place	At your place
13.	Study materials	Library, internet	Internet
14.	Cost	Expensive	Cheap
15.	Dependent	On teacher/guider	On self

Table 1: Difference Between Under Guidance and Self-Education

B. Experience (What is experience?)

After a good education every learner wants to do a job. The job can be self-employed or an organization / company. Depending on the learner and job provider, the job may be temporary / permanent, part-time / full-time or trade / profession.

In the case of education, a person has to acquire knowledge hence he is called a learner / student while in the case of a job a person is called an employee.

So here, we will call the learner as an employee.

Before the job one thing comes to mind: what is the job? Where else to work? The answer is that the job is the next stage after education where we do real work with the knowledge learned during education, which gives some new things to the society and in return we get money.

In another way we can say that the time of job is the time where we implement our knowledge and earn money.

When you work for a few months / years, it is called experience. In a job, an employee has to accept certain duties, responsibilities so that his / her tasks can be evaluated. The skills of an employee are seen while doing his work or we can say that the education obtained during school / college is a real result at the time of job where the learner acquiring knowledge converts his skills into physical result as an employee.

As an employee works, his experience increases. Even during his long experience, he learns some new things and implements them in his work. Through work experience, employees / professionals acquire real-life skills and also get the real value of their education. On-the-job experience is of paramount importance for any learner to develop professional skills and understanding of the work environment.

Nowadays there is a demand for experienced and professional employees in every job sector as an experienced person will be better in their job role and an employee with full and versatile skills.

In a job, work experience gives more valuable knowledge or learning, and an employee tries to increase his work performance and strengthen himself so that he can impress the employer.

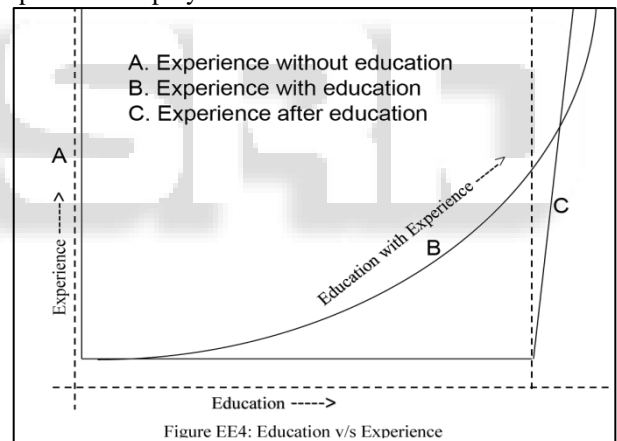

Figure EE4: Education v/s Experience

Experience can be gained in various ways. Many people gain experience without school / college education, are unable to study for any reason and can start work. But we are discussing here about educated people.

Many people get job experience after studies and some people get job experience along with studies. It does not matter how the experience has been gained. But I think that people who do jobs with studies, they learn more than those who do jobs after studying. They become versatile and more knowledgeable employees.

And, I think experience is the best way of learning and getting knowledge.

II. EDUCATION V/S EXPERIENCE

- Education is the first stage of life while experience comes later.
- Education teaches patience, tolerance, sentimentalism and experience teaches how to work in mutual harmony and pressure.

- Education gives theoretical knowledge while experience comes through practical knowledge.
- In education, a learner learns how and in what manner of work is done, while the experience is found through the methods of working, when and how to do a work so that it is done easily.
- Education teaches the art of identifying and developing behavior, ability, knowledge and skills according to the situation / place / person, while in experiences an employee learns how to manage a task, how to improve ability and knowledge, and How to present your own skills.
- Education promotes honesty, confidence, and respect for others, and experience enhances brand, value, and self-reliance.
- When a learner learns, he proves his knowledge or skills through examinations and seminars and in turn is awarded rankings and medals. And as soon as an employee gets experience, he makes his work a passion and attracts his boss which makes him respected and makes his career strong as experience.
- Through education, a learner gets past information and sets ideas to set his / her goal in the present moment and he / she decides what I will do in the future of life. Based on experience, an employee obtains information in their career field and is able to make decisions for future work.
- In education, a learner is able to recognize that he or she chooses one of the possible alternatives. And decide what is right for him or not? After studying, a person comes to know about the right path of his career by experience so that he chooses his right path.
- When a learner starts his education life, he is not at liberty to study any particular subject, even if he does not know what he should learn. After a long period of study, he decides some options to make his career. But in job work he knows very well which career field is best for him. Sometimes it may be that his experience is not related to his desired career path, but he can gain more skills and with experience he can learn problem-solving techniques, teamwork, various culture, communication skills and etiquette.
- The education obtained makes it easy to get a job and with education the employer knows that you can do the job properly and with experience, the job is easily found because the employer knows that you know the job well And you do not need to teach work from the beginning.
- Education is most important to make a career successful and experience is important to be successful / to get success.
- In both, more educated people earn more than less educated people and even those with more experience in the job get quicker and better jobs than those with less experience / fresher.
- Education helps in learning more and acquiring more knowledge and in society, setting a goal for the society, and being able to quickly understand any issue / problem and find the right solution to the problem.
- Through education, a learner acquires knowledge by spending time and money while an employee spends the time and earns the money and experience from the job.
- Education is complete without guidance / guidance aimed at self-knowledge. While in the job an employee works under his / her own firm / other's organization for the purpose of improving his/her ability and experience.
- Yes, education is part of life, so it affects our life like getting a job / career, intellectual, social, personal, and more other things. and experience is also part of life so it affects the same as education.
- Education changes/grows the knowledge/skill in life whereas experience changes the lifestyle.
- Education develops the speed of learning and the ability to learn and imparts theoretical knowledge and analytical skills to show 'why it doesn't work'. Whereas experience develops practical knowledge and the ability to identify a work that 'why doing it does not work'.
- In education a learner learns the old concepts/ thought processes or technologies while in experience an employee learns new concepts/ thought processes or technologies.

III. CONCLUSION

Both education and experience are important for an educated person. Where education makes us capable/ educated, experience tells us how capable / educated we are.

Education is the process / means of increasing skills until you die.

Experience makes us safe in society that we can do something for the society and by experience we strengthen ourselves. Experience arranges our knowledge accurately on how to solve the problem.

so, we think education and experience is dependent to each other and is the part of life. and experience comes after getting knowledge
